

Cookie Policy

Cookies, browser storage and analytics. What the website currently uses — and what you can control.

REVISION / 19 OCTOBER 2026

01 Cookies and similar technologies

This Cookie Policy explains the use of cookies and similar browser technologies on itdoc.io, including its English pages. The website administrator is Zhurlov Nikita SE (Sole Entrepreneur), trading as ITdoc (Russian designation: ИП Журлов Н.О.). Contact: doc@itdoc.io.

Cookies are small data items stored by a browser. Similar mechanisms include local storage, analytics identifiers and tracking pixels. Local storage is not a cookie, but we describe it here because it also remembers information in your browser.

02 What this website uses

The website stores acknowledgement of the cookie notice in local storage under the key itdoc-cookie-consent. The stored value is the time when you dismiss the notice; the site checks for it on later visits. The current implementation does not set a fixed expiry for this local-storage record.

Administrative sign-in uses a session cookie, itdoc_admin, for authorised administrators. It is not a requirement for browsing the public website. Session-related storage depends on the configured environment and is separate from a public visitor's enquiry.

Public pages load Yandex.Metrica counter 50217259. The current settings enable Webvisor session replay, click mapping, link tracking and accurate bounce measurement. Visits can be recorded when navigating between public pages. The counter is not rendered on administrative pages.

Cookie Policy

03 Analytics information

Yandex.Metrica may receive page addresses, referral sources, interaction events, browser and device characteristics, technical identifiers and IP-related information. Webvisor can record interactions for session replay. The exact cookies, identifiers and their lifetimes are governed by the service and browser settings.

Analytics help us understand navigation, usage and enquiry sources. This policy does not describe analytics as entirely anonymous, and it does not promise a fixed cookie lifetime where that lifetime has not been verified.

04 What the banner does — and does not do

The current banner is an informational notice. Selecting “Got it” records that acknowledgement and hides the notice. It does not provide category-by-category preferences or an analytics opt-out.

Yandex.Metrica currently loads on public pages independently of whether the notice has been dismissed. Dismissing the banner must not be interpreted as an effective prior-consent mechanism for jurisdictions that require one. This policy describes the current implementation; it does not claim compliance with every jurisdiction’s cookie-consent rules.

Cookie Policy

05 Your browser controls

You can remove cookies and local storage in your browser's site-data settings, block cookies or use browser privacy and tracking-protection tools. Blocking the analytics service can limit its collection; simply hiding the banner does not do so.

Clearing the site's local storage may cause the notice to appear again. Blocking all storage can affect session-dependent functions. Cookie blocking does not necessarily block every analytics request or delete data already received by a provider.

Yandex provides information about Metrica and its privacy tools at yandex.com/support/metrica/en/. Consult your browser's help for cookie and site-storage settings.

06 Enquiries, updates and contact

Personal information submitted through a contact form is covered by the Privacy Policy. Removing browser data does not delete a submitted enquiry. For questions or requests concerning that information, email doc@itdoc.io.

We may revise this policy when the site's technologies or their settings change. The revision date identifies this edition; the English legal-documents page provides the current published PDF.
